

Naim Ghulam

👤 Professional Summary

Fullstack developer with broad experience across modern web frameworks including Vue, Angular, React, NuxtJS, NextJS, and Electron, backend experience in C# and Terraform with exposure to Kotlin and Go. Strong automotive and embedded background with CAN bus and C++.

📁 Employment History

Embedded Developer and CEO at GCG Sweden AB, Trollhättan

2024 — Present

Co-founded and run a product company delivering custom infotainment and ECU solutions for SAAB 9-3 owners together with my brother.

- Sourced the remaining NEVS Android-based infotainment systems for the SAAB iQon platform.
- Developed in-house C++ embedded software for a custom ECU that coordinates vehicle and radio-unit communication.
- Reverse engineered CAN bus behavior using Vehicle Spy 3 and built C++ CLI tools and Bash scripts to analyze and manipulate vehicle/radio data.
- Shipped an Android software stack using modified OEM software sold to SAAB enthusiasts worldwide.

Fullstack Developer at Autocom Diagnostic Partner AB, Trollhättan

2023 — Present

Contributed to fullstack and backend development in an agile team building products used by Autocom's diagnostic applications.

- Built Secure Gateway and user APIs in C#, Go, and Kotlin to support certificate-based access and vehicle diagnostics.
- Developed customer portal and administrative portal features in Angular and TypeScript, including iDenfy identity verification before Secure Gateway access.
- Co-developed the foundation of the next-generation customer portal and helped standardize installation and use of the internal UI framework across all of Autocom's platforms.

Backend Developer at Trestads Tolkförmedling AB, Trollhättan

2023 — 2023

- Migrated a third-party booking system from Linux to a local Windows Server environment using Vagrant and Task Scheduler.
- Implemented email and SMS notifications for translators using Generic Mobile and Mailgun.
